Tier I Operating Permit Administrative Amendment Number T1-040043

Dear Colonel Shugg:

The Department of Environmental Quality (DEQ) is issuing amended Tier I Operating Permit No. T1-040043 to Mountain Home AFB in accordance with IDAPA 58.01.01.381, *Rules for the Control of Air Pollution in Idaho*. The permit has been administratively amended by DEQ as requested in your letter received November 29, 2004, and is effective immediately.

The following permit conditions have been administratively amended. All other permit conditions remain unchanged.

- The request is to include the descriptions of four existing boilers at the facility and to correct heat inputs to those stated on the permit application.

Please be aware of the following permit replacement:

- Tier I Operating Permit No. T1-040043 replaces Tier I Operating Permit No. T1-040024, dated October 1, 2004, the terms and conditions of which shall no longer be in effect.

A representative of the Boise Regional Office will contact you regarding a meeting with DEQ to discuss the permit terms and requirements. DEQ recommends the following representatives attend the meeting: your facility's plant manager, responsible official, environmental contact, and any operations staff responsible for day-to-day compliance with permit conditions.

**3. EMISSIONS UNIT GROUP 1: HOSPITAL BOILERS****Summary Description**

The following is a narrative description of the hospital boilers regulated in this Tier I operating permit. This description is for informational purposes only.

Mountain Home Air Force Base operates three dual-fuel-fired boilers (Kewanee boilers) for heating and other needs at the base hospital. Each boiler is rated at 5.231 MMBtu/hr, and can combust natural gas or distillate fuel. The Kewanee boilers vent emissions through a common stack. The PTC issued to MHAFFB for the boilers limit the amount of time the boilers can combust distillate fuel. No operating limit applies when the boilers combust natural gas.

Mountain Home Air Force Base also operates one dual-fuel-fired Hurst boiler for heating and other needs at the base hospital. The Hurst boiler is rated at 1.05 MMBtu/hr, and can combust natural gas or distillate fuel. The PTC issued to MHAFFB for the boilers limits the amount of time the boilers can combust distillate fuel. No operating limit applies when the boilers combust natural gas.

Table 3.1 lists the device(s) used to control emissions from the hospital boilers.

**4. EMISSIONS UNIT GROUP 2: JET ENGINE TESTING – HUSH HOUSE I, BUILDING 1344, AND HUSH HOUSE II, BUILDING 270**

**Summary Description**

The following is a narrative description of the jet engine testing operations regulated in this Tier I operating permit. This description is for informational purposes only.

Mountain Home Air Force Base tests aircraft engines as required by operational conditions. The engines are tested in either one of two "hush-houses", which were constructed to minimize the noise from engine test operations. The stack has numerous baffles to dissipate the sound energy. Engines are removed from aircraft and transported to one of the hush houses, affixed to a test stand, and then adjusted and/or repaired. Upon completion of the adjustments and repairs, the engine is test fired at idle, approach, intermediate, military and/or afterburner power settings for a short time period. Each criteria pollutant has an individual emissions rate when operated at each power setting.

Table 4.1 lists the device(s) used to control jet engine testing emissions.

**5. EMISSIONS UNIT GROUP 3: AIRCRAFT AND AIRCRAFT PARTS SURFACE COATING SPRAY BOOTHS****Summary Description**

The following is a narrative description of the corrosion control units regulated in this Tier I operating permit. This description is for informational purposes only.

The corrosion control treating process consists of surface preparation and painting aircraft and aircraft parts in one of two paint booths. Aircraft and some parts are treated in the large paint booth (LPB-1330), and parts are painted in the small paint booth (SPB-1330). The items to be treated are first cleaned with solvents, then painted using HVLP paint spray guns. The painting equipment is cleaned using solvents after use. Both paint booths exhaust through particulate filters that have a manufacturer-rated efficiency of 97%. The large paint booth also exhausts through a carbon adsorption filter, which has a manufacturer-rated efficiency of 90% for VOC emissions. Permit to Construct No. 039-00001, dated May 30, 2002, limits the amount of paint and solvent used on a 24-hour and annual basis. Also, the amount of paint used containing HDI (CAS No. 822-06-0; Hexamethylene Diisocyanate) is limited daily.

Table 5.1 lists the device(s) used to control spray paint coating emissions.
